

**Patient:** Bichone Frise

**Age:** 8 year old

**Sex:** Female/Desexed

**Name:** Cloe

**Symptoms:** Prolapsed third eyelid (cherry eye)

**History:** Previously had cherry eye and natural inflammatory assisted and prolapsed returned to normal within 24 hours.

## Vet Diagnosis

Vet has advised client that anti inflammatory has failed and surgery was necessary to correct the prolapsed third eyelid. \$600 - \$800 quoted for surgery. Client decided to proceed with natural therapy as a first alternative.

## First Visit Treatment

### Diet

Already on a natural diet

### Supplements

- Heel Traulmeel 1ml x 2 daily
- Eye refresh 1 drop 2 x per day

## Second visit

Prolapse remains. Anti inflammatory not enough this time round.

### Supplements

- Natural Animal Solutions Omega 3, 6 and 9 Oil with Vitamin E for Dogs
- Tincture mixture of Meadowsweet and Bilberry
- Eye refresh 1 drop 2 x per day
- Lectin

## Third visit

Inflammation not so red, prolapsed is looking pink but has not gone back in.

### Supplements

As above but decided to add Silicea to strengthen the eye tissue.

After 3 weeks on Silicea the eyelid has returned to normal. Will keep using silicea and Lectin for 3 months to strengthen the eye tissue.

Recommend that Silicea be used once per year for 3 month period to keep eyelid from prolapsing again.
