

Patient: Labrador

Age: 5 year old

Sex: Male/Desexed

Name: Geoffrey

Symptoms: Clipped coat and won't grow back. What is growing back is faded in colour and very course. Burnt patch of hair over bridge of nose and ears. Gets red on the groin area. Skin is dry. Previous ear infections. Has been on repeated antibiotics for itchy face and other irritations. Clears but always comes back in one form or another. Antibiotic treatment has commenced over a long period of time.

Vet Diagnosis

Vet diagnosed skin allergies and recommended the client get an allergy test performed. Cost \$1000. Two separate allergy tests were recommended totaling \$2000. Client decided to try alternative therapies instead.

First Visit Treatment

After speaking to client, they advised they clipped Geoffrey many months ago as he liked to swim in the pool and it was easier to dry him off with a clipped coat. I believe that Geoffrey doesn't have any skin allergies. I believe his coat has been burnt by the chlorine and because he didn't have his protective coating, the chlorine has absorbed into the skin and caused the above symptoms.

Diet

Natural diet

Supplements

- DigestaVite Plus
- High Potency Vitamin C (C-Max)
- Omega 3, 6 & 9 for dogs with Vitamin E

Phone call from customer (2 weeks later)

Hair has begun to soften and is growing back. Burned hair beginning to fall out.

Phone call from customer (2 weeks later again)

Hair is soft and can see large amounts beginning to grow back. Old burnt hair has fallen out and replaced with new coat.

Recommendation

Continue with supplements till coat has fully come through. Once finished growing then

- C-max to be stopped
- DigestaVite Plus to be reduced to maintenance dosage
- Omega oil to be reduced to ¼ of current dose. (maintenance dose)

Before

During (approx 2 weeks then 4 weeks later)

After (Coat back to normal in less than 2 months)
